
OPSIS Quality Policy

OPSIS AB develops, manufactures and markets measurement equipment and software for control of air pollution in outdoor air and the work environment as well as for process control and emission control.

Quality entails a high level of measurement accuracy, good functional safety and a long useful life. This is attained by selecting robust designs with the best technology, material and components as well as good service support. Our goal is to deliver correct products at the correct time.

The management of OPSIS undertakes to continuously working with improvements to the management system and to comply with applicable requirements and the quality requirements, which are imposed on it.
