

# OPSIS LiquidLINE KjelROC Scrubber

Environment friendly Digestion

# KJELROC SCRUBBER

A Scrubber is recommended for fume control and in areas where water is expensive. The KjelROC Scrubber can save costs.

## RELIABLE AND EASY WITH A SMALL FOOTPRINT

The KjelROC Scrubbers are built to work in an environment with an excess of corrosive fumes and high heat. All materials are carefully selected. Small footprint and ease of use has been prioritized when designing the KjelROC Scrubbers.

- Cooler and containers in Borosilicate glass and connection tubes in Viton, in order to withstand the demanding environment and reduce maintenance costs
- Small footprint makes it easy to install the Scrubber close to the KjelROC Digester
- Reagent containers with a volume of 2 liters each, minimize the need for frequent change of scrubber reagents. Easy access to exchange containers, which are all made in high quality Borosilicate Glass.

## HIGH STANDARD AND OPTIONS

All KjelROC Scrubbers can be supplied with optional water cooling as well as additional flask for digesting liquid samples. All Scrubbers has the possibility to adjust the suction power.

- Water cooler and Water Accessory to even further increase the efficiency of the fume extraction and to handle large volumes of vapour.
- Accessible 6-step suction control to regulate suction power, makes it easy to achieve a good and efficient digestion.
